ENVIRONMENTAL POLICY

Africhill recognizes its duty to ensure that its activities are conducted in a manner that will minimize environmental impacts and prevent harm to the health of people from exposure to potential emissions or pollution arising from our operational activities. In meeting this duty we will comply with the requirements of *the world health organization* and all other applicable statutory requirements, as well as industry standards and codes of practice, and (where contractually specified) the environmental requirements of our clients.
Environmental sustainability is a key organizational value of our business.

It is our policy to:

_ Strive to improve our environmental performance through waste reduction, reuse And recycling, as far as is practicable. Where further improvements are difficult, Carbon neutral programs shall be considered and implemented.

_ Prevent pollution to be caused or allowed as a result of our operations, including The emission or transmission from our work sites of any noise, odor, atmospheric Contaminant, or electromagnetic radiation that may unreasonably interfere with the Health, welfare, convenience, comfort or amenity of any person.

_ Not cause or allow serious or material environmental harm.

_ Prevent unauthorized clearing of native vegetation, or contravention of the Conditions of an authorized clearing permit.

_ Purchase plant, equipment and materials (wherever practicable) that will prevent or Reduce the likelihood of unauthorized emissions or pollution.

_ Maintain any devices fitted to plant and equipment for the purpose of preventing or Minimizing unauthorized emissions or pollution.

_ Not cause or allow waste to be placed in a position where it may result in Environmental pollution, and where required, ensure transportation and disposal by An authorized provider.

_ Ensure that dangerous goods are correctly stored and handled on our work sites.

_ Continuously review our environmental management system in order to meet or Exceed best practice.

_ Establish work practices and programs that will result in ‘Zero Harm’ to people, the Environment and the community in which we operate.
